Virtual Technical Conference Platform

TASK-1 – Requirements Table

Req-ID	TYPE	DESCRIPTION	PRIORITY	ACCEPTANCE CRITERIA	RATIONALE
FR-001	FUNCTIONAL	System shall allow Conference Authors to submit paper/talk proposals (title, abstract, track, file upload).	HIGH	Author can submit proposal details and files successfully.	Enables proposal submission.
FR-002	FUNCTIONAL	System shall allow Track Chairs to assign reviewers and make accept/reject decisions on submissions.	HIGH	Track Chair can assign reviewers and record decisions.	Supports the review process.
FR-003	FUNCTIONAL	System shall notify Authors of submission status and decisions (email + in-app).	HIGH	Authors receive email and in-app status notifications.	Keeps authors informed.
FR-004	FUNCTIONAL	System shall allow Track Chairs to schedule accepted sessions into the track timeline.	MEDIUM	Track Chair can schedule accepted sessions.	Enables organized scheduling.
FR-005	FUNCTIONAL	System shall allow Authors to upload camera-ready/final presentation materials post-acceptance.	LOW	Authors can upload final presentation materials.	Collects required final materials.
NFR-001	NON-FUNCTIONAL	Scalability – support concurrent virtual sessions and thousands of simultaneous attendees without degradation.	HIGH	Supports thousands of concurrent attendees without degradation.	Ensures system scalability.
NFR-002	NON-FUNCTIONAL	Security – encrypted data in transit/at rest; secure file uploads with malware scanning.	HIGH	Data is encrypted and uploaded files are malware-scanned.	Protects system and user data.

TASK 2- UML use Case Diagram

TASK 3- USE CASE FLOW DOCUMENT

A. Submit Proposal — Main Success Scenario

Actor: Conference Author

1. Author selects **Submit Proposal**.
 2. System displays the submission form.
 3. Author enters the title, abstract, and track.
 4. Author uploads the proposal file.
 5. System validates the entered details and file.
 6. Author submits the proposal.
 7. System stores the proposal and confirms successful submission.
-

B. Make Decisions — Main Success Scenario

Actor: Track Chair

1. Track Chair opens the submitted proposals.
 2. System displays the proposal details.
 3. Track Chair reviews the proposal.
 4. Track Chair assigns reviewers if required.
 5. Reviewers submit their reviews.
 6. Track Chair evaluates the reviews.
 7. Track Chair selects **Accept** or **Reject**.
 8. System records the decision.
-

C. Notify Authors — Main Success Scenario

Actor: System

1. System detects a change in submission status.
2. System identifies the concerned author.

3. System prepares a notification with the decision/status.
 4. System sends an **email notification**.
 5. System displays an **in-app notification**.
 6. Author views the updated submission status.
-

D. Schedule Sessions — Main Success Scenario

Actor: Track Chair

1. Track Chair opens the accepted submissions.
 2. System displays the accepted proposals.
 3. Track Chair selects a proposal to schedule.
 4. Track Chair selects the appropriate track/session.
 5. Track Chair sets the date and time.
 6. System checks for scheduling conflicts.
 7. System saves the session in the conference timeline.
 8. System displays the scheduled session.
-

Alternate Flow — Submit Proposal

Alternate Flow: Invalid File or Missing Details

1. Author enters the proposal details and uploads the file.
2. System detects missing details or an invalid file.
3. System displays an error message.
4. Author corrects the details or uploads a valid file.
5. System validates the submission again.
